

# Q-Rack Shelving Assembly

!It is advised to use a rubber mallet and not a hammer to protect from damage .  
!Assemble end frames first. Start with 2 angle posts. Bang in the shorter double rivet beams. Use one at top, bottom and middle.  
!Connect assembled frames with longer beams. One at top and bottom, front and back. If adjoining another bay use T posts.  
!Choose your intermediate shelf levels. Use Single (300 lb), Low Profile (400 Lb), or Double Rivet (1200 lbs) for the intermediate levels.  
!Lay boards atop beams. Load evenly to weight allowance.
